

AMENDMENTS TO THE CLAIMS

1. (Currently amended) A lateralization device for providing a lateralization effect to a body portion of a user, comprising:

a supporting member adapted to be supported in a fixed position; and

a lateralization member mounted onto the supporting member and expanding laterally therefrom to provide a lateralization effect to a user's body portion;

wherein the an angular orientation of the lateralization member against the supporting member is adjustable to alter said lateralization effect. varies in different lateral directions.

2. (Original) The lateralization device of claim 1, wherein the supporting member comprises a post member.

3. (Original) The lateralization device of claim 3, wherein the post member comprises a substantially cylindrical outer wall.

4. (Original) The lateralization device of claim 3, wherein the post member comprises a plurality of interference fittings on the outer wall for engaging with complementary interference fittings formed on an inner wall of the lateralization member.

5. (Original) The lateralization device of claim 1, wherein the lateralization member is formed of a material that can resist a pressure exerted thereon and maintain its initial shape during a normal use.

6. (Original) The lateralization device of claim 1, wherein the lateralization member comprises a substantially cylindrical member with a recessed portion formed by an inner wall.
